PROJECT REPORT

NAME: SALONI TEOTIA

REGISTRATION NUMBER: 25MIM10155

BRANCH: INTEGRATED MTECH

YEAR: FIRST YEAR (2025-26)

COURSE CODE: CSE0001

DATE: 25 MARCH 2026

INTRODUCTION

In today's digital world, being digitally literate is essential for students to succeed academically and professionally. The project is divided into five major tasks, each focusing on a different aspect of digital literacy. The objective of this project was to raise awareness regarding digital literacy through activities such as designing an infographic, making a digital portfolio, exploring online platforms, professional communication, and cybercrime. The activities helped me gain hands-on experience regarding tools and concepts that are vital in the digital environment.

The scenario here is I have been selected as a Student Digital Ambassador at my college, it is my role to ensure that fellow students understand how to use digital tools, communicate professionally, and stay safe online. This project not only helped me become more technically savvy but also helped me become more aware of the importance of online safety, professional communication, and digital presence.

Task 1: Infographic Write-up

For this task, I was required to design an infographic on digital literacy using Canva. The objective was to present key concepts in a clear, concise, and visually appealing format. I created a one-page infographic that covered four main sections: the meaning of digital literacy, essential digital tools for students, safe internet practices, and email etiquette. To enhance clarity and engagement, I used simple icons, balanced colors, and a structured layout that made the information easy to read and understand.

Through this activity, I gained a deeper understanding that digital literacy is not just about knowing how to use technology, but also about using it responsibly, safely, and effectively. The most interesting part of this task was designing the layout and choosing visuals that best represented each concept. At the same time, I found it challenging to keep the content brief while still making it informative.

Overall, this task helped me improve my creativity and design skills and made me realize the importance of visual communication in presenting information effectively.

Task 2: Digital Portfolio Write-up

In this task, I created professional profiles on GitHub, LinkedIn, and Kaggle to begin building my digital portfolio. Each platform serves a unique purpose in showcasing skills and connecting with opportunities. GitHub is mainly used to upload and manage coding projects, helping to demonstrate technical abilities. LinkedIn is a professional networking platform where I can connect with peers, mentors, and recruiters. Kaggle is widely used for data science and machine learning, allowing users to work on datasets, participate in competitions, and collaborate with others.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn and Kaggle, I updated my profile details, including my educational background and interests. I plan to regularly update these platforms by adding projects, improving my profile, and engaging with the community.

This task helped me understand the importance of maintaining a strong digital presence. It also showed how these platforms can enhance learning, improve visibility, and create better opportunities for internships and future career growth.

Task 3: Platforms Write-up

For this task, I explored two different platforms: HackerRank and Google Forms. On HackerRank, I attempted a beginner-level coding problem, which helped me understand the basics of problem-solving and logical thinking in programming. It gave me practical exposure to how coding platforms work and how they can be used to improve technical skills through regular practice. This experience also motivated me to continue solving more problems to strengthen my programming abilities.

In the second part of the task, I created a Google Form based on digital literacy. I included a mix of multiple-choice and short-answer questions to make the quiz interactive and informative. I also explored how responses are automatically collected and organized in Google Sheets, which makes data analysis easy and efficient.

Overall, both platforms proved to be very useful for academic purposes. HackerRank helps in building coding skills, while Google Forms is effective for conducting surveys and quizzes. This task introduced me to valuable tools that I can continue using throughout my academic journey.

Task 4: Communication Write-up

One example of poor digital communication is when an unprofessional email is sent to a professor, for instance, without a subject line, an informal tone, or an inappropriate greeting. This may give a wrong impression and may cause the request to be ignored.

For instance, when a student sends an email to a professor saying “Send me notes ASAP,” it may be considered rude. On the contrary, an appropriate email should be sent with a polite tone, request, and structure.

This task has taught me the significance of professional communication, especially in emails and social media. This type of communication may help in building a positive image.

Task 5: Cybercrime Write-up

While learning about phishing, I was astonished by how easily a person could be tricked into giving away their information by emails and websites. The emails and websites look so authentic and make people act impulsively.

A habit that I think is important and will definitely change is being careful while clicking on any link by checking its authenticity first. Additionally, I will avoid giving away my information on the internet and ensure two-factor authentication is enabled.

This task has helped me become more cautious about the threats on the internet and the need to stay alert. It has also shown me how a small precaution can save me from serious issues.

Conclusion

This project has greatly helped me improve my understanding of digital literacy and its significance in the modern world filled with technological advancements. With the various tasks, I have been able to understand the use of digital tools for presentations and the creation of a professional portfolio. Moreover, I have been able to improve my communication skills, especially through writing emails and the use of etiquette.

However, the best part of this project has been the creation of awareness concerning cyber safety and the dangers involved in various cyber-activities. I have been able to understand the importance of protecting my personal information and the responsible use of the internet. Moreover, I have been able to understand the significance of creating a positive digital presence, which is crucial for future academic and professional opportunities.

Therefore, this project has been extremely crucial for my future academic and professional life as it has provided me with the necessary knowledge and hands-on experience. This has helped me improve my confidence and responsibility as a digital citizen.
